

Harsh Kesarwani

Title: Consultant
Location: Pune, India
Languages: Hindi (native), English (fluent)
Email-id : Harsh.kesarwani@capgemini.com
Mobile number: +91-7030858689

Experience Summary

- 6.5 Years of Experience
- Completed Full Stack Engineer Program in Cognizant Internal program JAVA, Spring Boot, Rest API, Microservices.
- Worked on Internal certification on JAVA full stack developer and made some dummy projects using HTML5, CSS3, Angular 10, Core java, Hibernate, Microservices, Docker, MongoDB and Amazon Web Services (AWS) in LTIMindtree.
- Worked on Jira/ Confluence, Kibana, Win SQL and GitHub.
- Currently working on the AWS Associate developer certification.

KEY SKILLS:

- **Functional:**
 1. Project environment setup and initiation
 2. Requirements gathering
 3. Team handling and mentoring
 4. Code quality review
 5. Debugging and issue resolution

- **Technical:**

1. **Languages/Frameworks:** Java 8/17, Spring Boot, Microservices, REST APIs
2. **Frontend:** Angular 12, HTML, CSS
3. **Tools:** Git, Jira, Eclipse, IntelliJ
4. **Cloud & Infra:** AWS (learning), ArgoCD, SonarQube
5. **Messaging:** Kafka
6. **Databases:** Oracle, MySQL

Experience

01 Type of Industry:

Insurance Domain

Project Description:

At Allianz, I have worked across two major business domains: **BMP Claims** and **Commercial Claims**.
In the **BMP Claims** domain, I initially worked with the **Topaz team**, focusing on Litigation and Fraud. Our team contributed to stabilizing and developing core functionalities for the UK layer. I worked on multiple epics, including synchronous and asynchronous communication, developing REST APIs, and other core functional enhancements.
After Topaz, I moved to the **MidCorp team**, where I worked for approximately 3–4 months, developing various business functionalities.
Later, I joined the **Emerald team** under the Commercial Claims domain. Here, I contributed to setting up and stabilizing the core layer, building the repository structure, and working extensively on infrastructure setup in **ArgoCD** and **SonarQube**. I also developed key components such as Kafka-based integrations and REST APIs.
Currently, I am part of the **Diamond team**, which also falls under Commercial Claims. In this team, I have worked on multiple requirements across different epics involving synchronous and asynchronous workflows, as well as development of REST APIs.

Role/Title:

Consultant

Project Duration:

July 2024 –

Responsibilities:

BMP Claims Domain

Topaz Team – Litigation & Fraud (UK Layer)

- Contributed to stabilizing and enhancing core functionalities for the UK layer in the BMP Claims domain.
- Developed synchronous and asynchronous communication flows.

- Designed and implemented REST APIs for various business requirements.
- Participated in the development of multiple epics related to Litigation and Fraud.
- Collaborated with the team to improve performance, stability, and integration of core backend services.

MidCorp Team

- Worked for 3–4 months on implementing business functionalities in the MidCorp area.
- Contributed to backend development activities and feature enhancements.

Commercial Claims Domain

Emerald Team

- Helped set up and stabilize the **core layer** for the Commercial Claims system.
- Established and structured the **repository setup** for the core module.
- Set up and configured **infrastructure components** including **ArgoCD** and **SonarQube**.
- Developed Kafka-based messaging functionalities (producers/consumers).
- Built REST API services for core business use cases.
- Supported the stabilization and continuous improvement of the Commercial Claims platform.

Diamond Team (Current Team)

- Working on requirements across multiple epics in the Commercial Claims domain.
- Developed synchronous and asynchronous communication flows.
- Built and enhanced various REST APIs to support core business processes.
- Contributing to backend development, debugging, and performance improvements.

Operating Systems:	Windows
Software / Languages:	Java8 and Java17, Spring Boot, Microservices, REST API, Oracle, GitHub, Jira, Kafka, ArgoCD
Special Tools:	Eclipse, GIT, IntelliJ

02 Type of Industry: Insurance

Project Description:	In Principle Global Service, I have worked on two different projects i.e., the Affiliate as well as Master Data Management (MDM) where I was given exposure to different applications related to insurance domain applications. ☐ In Master Data Management (MDM), our main focus is on keeping a super-accurate "golden record" in our system. This record holds the best and most reliable data about people and organizations. The goal is to make it easy for different parts of the business to use this top-notch data, helping everyone keep track of information efficiently. For the Affiliate which was a legacy system, I have resolved customers queries and complaints by responding to tickets raised by clients and maintained accurate, detailed records of customer interactions and the actions taken to resolve their issues.
Role/Title:	Software Engineer
Project Duration:	Jan 2023 – Nov 2023
Responsibilities:	Worked as Software Engineer and an individual contributor with below responsibilities. • Project environment setup and initiation • Requirements gathering • Training the freshers • Analysis of bugs • Addition of enhancements
Operating Systems:	Windows
Software / Languages:	Java8, Spring Boot, Microservices, REST API, Oracle, GitHub, Jira
Special Tools:	Eclipse, GIT

03 Type of Industry	Banking
Project Description:	In Riyadh Bank, we worked on Riyadh Online application in which we mostly worked on enhancing the application according to the requirement gathered from the client.
Role/Title:	Software Engineer
Project Duration:	Feb 2022 – Nov 2022
Responsibilities:	Worked as Developer with below responsibilities • Project environment setup and kick start

- Performance Optimization

Operating Systems: Windows

Software / Languages: Java 8, SpringBoot, HTML, CSS, Microservices, MYSQL

Special Tools: Eclipse, STS

4 **Type of Industry** **Insurance**

Project Description: Metlink is a physical and digital asset management (DAM) system used by MetLife. There are various services and front ends that make up the ALIAS “eco-system” or environment for system users and IT teams. In this various employee can register themselves for the insurance type and many more related activities.🔗

Role/Title: Junior Software Engineer

Project Duration: June 2021 – Oct 2021

Responsibilities: Worked as Developer with below responsibilities

- Project environment setup and initiation
- Requirements gathering
- Develop reusable components
- Implementation, Unit Testing and Deployment
- Performance Optimization implement pure components

Operating Systems: Windows

Software / Languages: Angular 10, HTML, CSS, Java 8, Spring Boot

Special Tools: Visual Studio Code

5 Type of Industry **Manufacturing**

Project Description:	In John Deere, we worked on different enhancements needed by the client for different application. We were also working to enable a scalable, maintainable, supportable, and better performing code. Analyzing As-Is stage, Detailed walkthrough of existing code and estimations based on code complexity for projecting To-Be state are the key features for this proposal.
Role/Title:	Junior Software Engineer
Project Duration:	Oct 2019 – Mar 2021
Responsibilities:	Worked as Developer with below responsibilities • Project environment setup and initiation • Requirements gathering
Operating Systems:	Windows
Software / Languages:	Java 8, Spring Boot, Spring, Mysql
Special Tools:	Visual Studio Code, Eclipse

Higher Education

- Bachelor of Engineering in Computer Science, JAI NARAIN COLLEGE OF TECHNOLOGY, BHOPAL (Affiliated by Rajiv Gandhi Pradyogiki Vishwavidyalaya)
